The Micro System

- Precision beam control from 5 - 60 degrees
- Adjusts to pan, tilt, spot and flood
- Can create multiple light levels within the same case
- Accepts all Micro controls (barndoor, filter frame, snoot, grid spot, etc.)
- Compatible w/Micro & Mini track and Slimtop support systems
- Designed for simple repositioning along support rod as exhibit changes

Micro fixtures and control accessories are the ultimate tools for precision lighting of museum objects. The lights reside within the casework, suspended from our 10mm support rod and hidden from view. Visitors see only the light, not the projectors. You direct the light energy only where necessary while respecting all preventive conservation principles. Objects that tolerate different light levels can be displayed side by side without damage from excessive illumination.

Items shown actual size.
